# Model 300 feasibility enquiry

Please advise which configuration and next steps you recommend.

## Project

I’m exploring aux box Model 300 for a possible site. My intended use is not yet confirmed.

I own the property. My project stage is early research. My configuration preference is a turnkey suite with kitchen. My preferred timing is next spring. My spending preference is CAD 150,000 before site work. The access details or questions I can share are: a narrow driveway; can you assess crane access from photos? For utilities and connections: water and electricity are near the house.

## Cost scope for discussion

Cost scope: Whole project. No usable priced components supplied. Unpriced or unresolved: Building, Upgrades, Delivery and lift, Foundation and site work, Service connections, Professional work, Fees, Tax, Contingency. Costs for this model need rechecking against the current project assumptions and remain outside the subtotal. Installed total unavailable; please help establish the missing scope.

Builder/provider: For Model 300, which current configuration, currency and dated price apply, and what upgrades, delivery/lift and tax are included or excluded?

Builder/provider: Which access/crane, foundation and utility facts would let you or a local contractor scope installation, and who coordinates that work?

Builder/provider: Who will confirm professional-work, permit-fee and tax scope, including any applicable waiver or credit?

## Questions for aux box

1. Can you share current dimensioned plans with their date/version, overhangs, interior floor area, height measurement reference and foundation requirements?

2. Do you service the proposed locality once identified?

3. What is the current lead time, when does it start, and what decisions, permits and site preparation must be complete before booking or delivery?

## Planning questions to resolve separately

Intended use is unconfirmed. The selected unknown-use scenario is outside the supported garden-suite comparisons. Ask City staff or a qualified local professional about applicable rules; physical observations remain approximate.

The property contact needs to confirm the main home, existing suites and waterfront context. City staff or a qualified local professional needs to check the applicable rules, legal measurement basis and any permit or title conditions. Please advise what product information you can provide to support that review.

## Site information

No current measured placement is available; the proposed position and delivery access remain to be established.
